E-COMMERCE SALES PERFORMANCE

Executive Business Report | January – June 2026

Prepared for Management Review

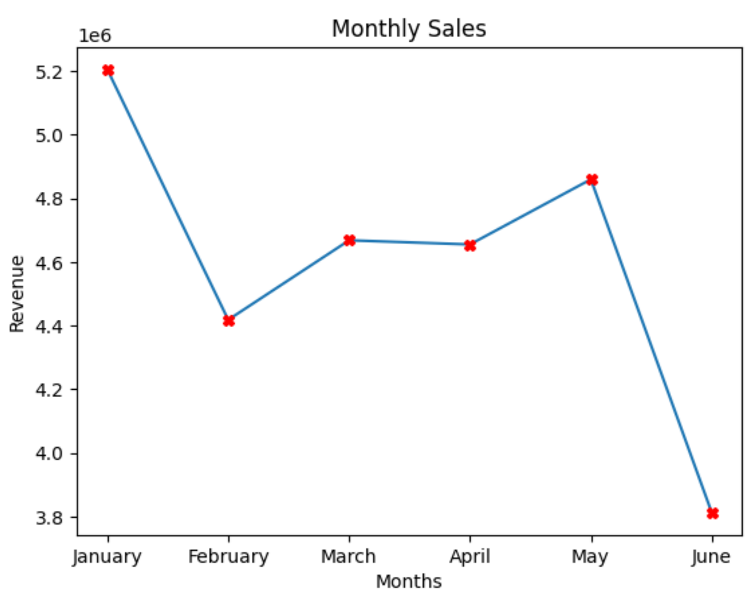
₹27.62M	1,000	3,035	₹27.6K
TOTAL REVENUE	TOTAL ORDERS	UNITS SOLD	AVG ORDER VALUE

The Bottom Line

The business generated ₹27.62M in revenue over six months, but that number hides two risks leadership should act on now: revenue is heavily concentrated in five products, and June closed the period with a steep, unexplained drop.

- **What's working:** Electronics — especially Laptop, Tablet, and Smartphone — is carrying the business, contributing 78% of all revenue.
- **What's not working:** Revenue fell 22% from May to June, the sharpest drop of the year, and 88% of revenue depends on just 5 products.
- **What to do next:** Find out why June dropped, diversify beyond the top 5 products, and invest in the two cities (Hyderabad, Ahmedabad) that are underperforming.

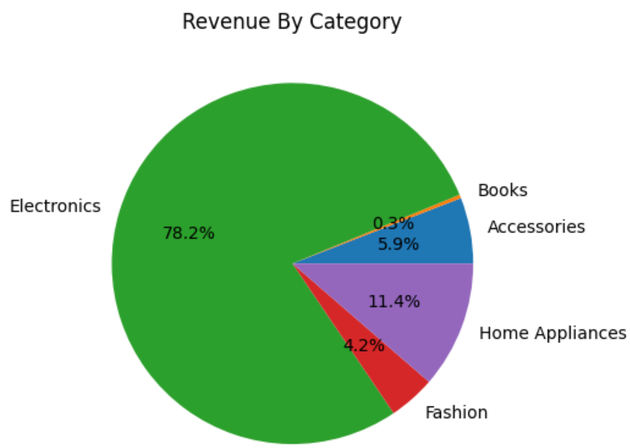
1. Revenue & Sales Trend



Monthly revenue, January–June 2026.

Revenue peaked in January at ₹5.21M, dipped in February, held steady through spring, then dropped sharply in June to ₹3.81M — a 22% decline from May and the lowest point of the year. This is the single most urgent item in this report: without knowing the cause, leadership can't tell if this is a one-off dip or the start of a trend heading into Q3.

2. Where the Revenue Comes From

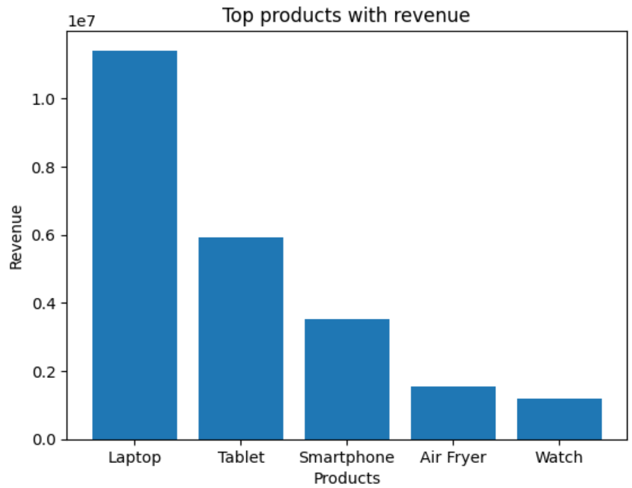


Revenue share by category.

Electronics generates 78% of all revenue from just a third of orders — this is a strength (high-value customers) and a risk (overexposure) at the same time. Fashion and Accessories bring in solid order volume but barely move the revenue needle, contributing under 10% combined.

Category	Revenue Share	Status
Electronics	78.2%	Core revenue driver
Home Appliances	11.4%	Stable, secondary
Accessories	5.9%	High volume, low value
Fashion	4.2%	High volume, low value
Books	0.3%	Negligible — review

3. Product Concentration Risk



Top 5 products by revenue.

Laptop alone accounts for over 40% of total company revenue. Combined with Tablet and Smartphone, these three products generate roughly 75% of everything the business earns. This is efficient, but fragile — a stockout, price war, or slowdown in any one of these products would hit overall revenue hard.

4. City Performance

Pune, Mumbai, Jaipur, and Bangalore are the strongest markets, each contributing roughly ₹3.1M–3.3M. Hyderabad and Ahmedabad trail 35–40% behind the leaders, representing the clearest regional growth opportunity.

City Tier	Cities	Revenue Range
Leaders	Pune, Mumbai, Jaipur, Bangalore	₹3.1M – ₹3.3M
Mid-tier	Kolkata, Surat, Delhi, Chennai	₹2.4M – ₹3.0M
Underperforming	Ahmedabad, Hyderabad	₹1.9M – ₹2.1M

5. What This Means for the Business

Three patterns matter most for decision-making:

- **1. Revenue depends on price, not volume.** Selling more units barely moves revenue — what matters is selling higher-value items. Marketing and inventory strategy should prioritize high-ticket products over pushing overall unit volume.

- **2. The business is over-reliant on 5 SKUs.** 88% of revenue sits in Laptop, Tablet, Smartphone, Air Fryer, and Watch. Any disruption to these products is a direct threat to revenue.
- **3. June's drop needs an explanation before Q3 planning.** A 22% month-over-month decline is too large to ignore — it could be a data issue, a stock issue, or an early signal of slowing demand.

6. Recommendations

1. **Investigate the June revenue drop immediately.** Rule out data issues and stockouts first, then check marketing spend and demand trends, before setting Q3 targets.

2. **Build a stronger second tier of products.** Actively promote Coffee Maker, Mixer, Shoes, Jeans, and Backpack to reduce dependence on the top 5 SKUs.

3. **Bundle low-value categories with high-value ones.** Pair Fashion and Accessories items with Electronics purchases to lift order value without needing new customers.

4. **Invest in Hyderabad and Ahmedabad.** Audit delivery speed, local marketing, and payment options to close the 35–40% gap with top-performing cities.

5. **Reassess the Books category.** At 0.3% of revenue, decide whether it's worth continued investment or should be scaled back.

6. **Set up early-warning tracking.** Monitor month-over-month revenue with a simple threshold alert so a drop like June's is caught and acted on sooner.

7. Bottom Line for Leadership

The business is healthy in aggregate — ₹27.62M in six months — but that strength rests on a narrow base. The two things that most deserve attention this quarter are: (1) understanding why June fell off a cliff, and (2) reducing how much the business depends on a handful of Electronics products. Everything else in this report — city performance, category mix, product rankings — is useful context, but these two issues are where leadership's attention should go first.
